

**The Chemola™ Delta 2015-09 and 2016-09** are hand operated lubricators that may be attached to 20 or 40-pound pails.

### Recommended Uses

There are two models of bucket guns in the Chemola™ Delta line. Model 2015-09 is a light weight, compact gun that is easily attached to a three gallon, 20-pound pail of lubricant. Model 2016-09 may be attached to a five gallon, 40-pound pail.

Each two-stage pump mechanism develops up to 15,000 psi. The delivery rate is 1/16 ounce per stroke. Both models combine the advantage and convenience of an easy pumping operation and hand gun maneuverability. The strong spring and follower plate assembly assures positive priming of all types of heavy or light bodied lubricants or sealants even in cold weather.

Each Chemola™ Delta Hand Bucket Gun comes complete with a 10-foot, 3/8" I.D. high pressure swivel hose with giant buttonhead coupler, follower plate and spring, 15,000 psi/kpa liquid filled gauge and an adapter (tee).
